Legends brought to life

Woods such as rosewood, ebony or teak have a mythical sound. For centuries they were – besides other exotic wood types – the epitome of exclusivity and the fascinating beauty of the natural product, wood. With HIGHLINE this tradition is now experiencing a renaissance in modern form. LEICHT lets legendary woods live again for the exclusive kitchen interiors – under sensible ecological conditions and with natural processing methods.

All items from the HIGHLINE are absolutely unique. Under the watchful eye of experienced wood specialists, distinctive veneer pictures emerge which will appear only once like this. Items of furniture from the HIGHLINE concept are highlights of a top class kitchen architecture. They unfold their aesthetic effect best as solitaires in a sophisticated surround. In the following pages LEICHT is introducing six legendary woods for exclusive kitchen designs. They are just waiting to come to life.
Rosewood has always been known as one of the most prestigious woods. Santos rosewood grows mainly in tropical South America, particularly in Southern Brazil and Bolivia. The strong basic tinge fluctuates between yellow-red and violet-brown. Because of the uneven arrangement of the colour stripes and the light yellow streaks, the wood grain may vary considerably. The soft to brilliant gloss and harmonious interplay of the warm colours with the unruly graining make this wood the jewel of the HIGHLINE Collection.
The olive tree is one of the oldest trees in the world and grows all over the Mediterranean, in South and East Africa as well as in India and Australia. This very decorative wood shows a subtle yellowish to cream coloured basic structure, infused with olive brown undulating veins. The attractively grained olive wood with its warm, golden-yellow-brown colouring needs a particularly careful processing. Most small grown trees, which are sometimes totally twisted, provide a particular and individual veneer picture.
Tineo grows especially in Chile. This deciduous tree grows up to 25 metres, with the lower part up to a height of some 10 metres remaining free from branches, thus producing a very even, elegant veneer. A lustrous shimmering reddish basic tinge moves from an elegant dark rosé to an intensive red-brown. Dark, greenish-black stripes enhance the vertical structure.
Furniture from the HIGHLINE programme shows its exclusive effect best as Segments in an impressive kitchen surround. Thus kitchens with a distinctive character are created, manufactured with high class workmanship.
Careful handling of nature

Whoever processes wood today has a responsibility towards nature and the protection of exotic wood types. LEICHT and many other manufacturers have submitted to a voluntary import limitation of tropical woods growing in the wild. This will curtail the depletion of tropical nature since such wood types no longer find a market in Europe. Our woods Santos Rosewood and Tineo come from controlled, re-growing cultivation. The wild olive is widespread and is not among the endangered types. The veneers of macassar and teak are today available only in limited quantities on the wood market. The veneers macassar, teak and fine olive from the HIGHLINE assortment are therefore reconstructed and industrially produced veneers whose basis lies in plantation cultivation. This allows us a clear conscience of having been careful with nature whilst we are enjoying the exclusive wood beauty.
Genuine macassar, also known as ebony, comes from India, Sri Lanka or Sumatra. Macassar has a mid brown basic tint with eye-catching beige and black stripes, which may also contain a reddish to violet colouring. These effects have been copied almost to perfection with the artificially produced wood veneer.
Olive appears here as an elegant striped wood, just like finely grown olive wood. The colouring can be compared with wild olive, the appearance of the grain however, is less unruly and showy but therefore provides a more timeless design.
Teak wood comes from Burma and also grows generously all over India, Thailand, Indonesia and Java. A particularly good reproduction of this teak are the typically length-running fiber structures, which appear from rough-textured to middle-fine and show a striking colouring of light-yellowish to golden-brown to brown-black.
Unique and made by hand
All furniture from the HIGHLINE assortment is unique – with the principal feature being the matchless veneer picture. Therefore experienced wood specialists are putting together individual veneers for every cupboard element and aligned to pictographic perfection. The veneer pictures of the complete order are matched to each other to create a fully harmonious kitchen appearance.

High gloss or matt
HIGHLINE is available in high gloss or matt. The high gloss, enhanced through buffing and polishing makes the depth effect of the exclusive graining particularly impressive. The matt gloss-satin finish-lacquering is applied in an elaborate many-layered process and produces a subtly elegant grain effect.

Selected veneers are supplied on palettes, already sorted.

The veneer strips are aligned and marked by the processor.

The fronts of a complete order are matched up in order to balance the harmony of the graining.
Planning
Because of its unique appearance, HIGHLINE is particularly ideal for combining with other programmes from the LEICHT-Collection. A most interesting impression is created with HIGHLINE when planned as a cooking isle, a segment-type area in the kitchen (tall units/ floor units) or as a single unit. HIGHLINE achieves its maximum effect when combined with LARGO-LG and -FG (with high gloss fronts) and -FS (with matt fronts) because here the total appearance of the fronts is at its most harmonious. LG especially offers a very individual colour match with the various living areas. Thus an inimitable character, a new quality of life in top class workmanship is born.

All HIGHLINE fronts are exclusively made to order and the veneers are personally matched individually and harmoniously by craftsmen. Important for all planning with these superior woods is to concentrate on a few significant materials or colours. This needs much discipline. The most important thing is to always highlight the beauty of the wood itself.
**Colour combinations**

Generally most colours from the total range of the RAL-system can be used. This applies for RAL-Classic and also for RAL-Design in their fine graduation. This system offers the finest shades for the individual match to the personal surround with the relevant woods. Also attractive with price in mind, is the access to the surrounds of K and KG from the LEICHT-Collection. The listing of colours in their sequence does not necessarily make a qualitative statement. Naturally, personal taste always plays an important role.

- **Rosewood**
- **Tineo**
- **Olive wild**
- **Olive fine**
- **Macassar fine**
- **Teak**
The variable use of lacquer in many RAL-shades and wood makes a very individual arrangement of function areas and living room atmosphere possible. The function isle with an integrated granite sink unit and high gloss lacquered macassar wood operates as an aesthetic high quality room divider.

The work surface in the cooking area is used to best effect where the midway units have been set into the back wall.

A functional kitchen with much storage space does not necessarily need much room. Here function, cosiness and the mix of open and closed elements have been carefully coordinated. The soft colours of the sophisticated rosewood, combined with the fresh green hues provide cozy comfort.

In contrast, the functional worktop and plinth in stainless steel.
In this kitchen clear and straight lines are combined with high quality materials. The red-toned base of the high gloss Tineo wood and the reflective high gloss fronts in a very light peach tone (RAL 060 90 10) give the appearance of a larger room.

The worktop may be planned in Corian in the exact colour match of peach. In contrast the living room part of the kitchen is lacquered with RAL 060 20 05, a deep black-brown, matching the warm feel of the kitchen to perfection. The highlight is set with cooking isle and tall units in Tineo.

A beguiling combination of wood, colour and metal. White high gloss lacquer and the light teak give the kitchen a light and transparent appearance. This kitchen is a successful example of an open, compact kitchen solution with ample storage and function space. The made-to-measure stainless steel worktop offers high functionality. Also conceivable is the combination teak with KG 031/120 from the programme AMICA, with an attractive price in this combination.
Material combinations

Exotic woods are a trend theme in the same way as high gloss is in any form. There is a clear path to follow here, either gloss combined with gloss or, in a distinct contrast, gloss – matt. Neutral materials such as stainless steel, chrome and glass would be particularly ideal, chromium plated handles are also back in vogue. In both, matt or high gloss, dark granite is almost always successfully used.
Validity / Quotation of prices

The **HIGHLINE** price list 2011 is an addition to the normal valid LEICHT price and type list. It contains all available cupboards and surround accessory elements. Comprehensive product descriptions and the corresponding planning tips to the components can be found in the LEICHT price and type list. The descriptions in the price columns are points, not prices.

The appropriate price will be determined by the kitchen specialist according to the relevant point value. All items priced per metre, intermediate measurements are rounded up to the next 10 cm.

For specials, please refer to the Company for detailed quotation.

Terms of business

For processing of orders, only our general sales, delivery and payment-conditions are valid (see last page). Verbal agreements not confirmed by us in writing are not valid. Accuracy of colour reproductions in this document cannot be guaranteed. Surfaces will mellow with time, caused by light and heat influence, therefore, front samples cannot be seen as binding.

Characteristics

All melamine surfaces applied at high pressure and high temperature to both sides of high density, multi layer chipboard core which has an exceptionally high resin content, environment friendly, to the prevalent legal regulations.

Our genuine wood fronts are produced from selected fine woods, fashioned by craftsmen, in specialised workshops. Surfaces are sealed with DD varnish to protect against dampness and grime. If you treat your kitchen according to the care and maintenance directions, enclosed with each kitchen, then the natural beauty of the wooden fronts will be retained.

Lacquered fronts are treated in several processes with special lacquer developed to the latest technology for much stressed surfaces. Colour deviations, when combined with lacquered or laminate surfaces, are unavoidable, even when the same colour references have been stated. They occur because of the different surface structure of the base materials. Colour matching is made according to light influence in normal circumstances. Larger colour differences which happen because of special light influence are therefore unavoidable and are no reason for complaint.

Additions / Replacement

Additionally supplied laminate, lacquer and wooden parts will show a different colour shade to existing fronts. These initial differences fade with time. Colour differences on additional parts are therefore unavoidable and no reason for complaint.

Veneered components of the product line **HIGHLINE**, particularly where fronts are concerned, are unique and cannot be exactly repeated in texture and colour. This must be taken into consideration when ordering replacements or any additional items. In these cases please discuss with LEICHT.

Installation

The installation must, for safety reasons, always be undertaken by specialists, according to the valid installation directions.

Attention is to be paid to the enclosed installation instructions. Please read carefully and follow the enclosed instruction manual from the manufacturer for appliances such as refrigerators, ovens, hobs, dishwashers and extractor hoods. It is also essential to ensure that electrical and plumbing connections be undertaken by accredited tradesmen only.

Complaints Samples

Being a naturally grown material wood, always shows slight variations in grain and colour which add to its appeal. These authentic features remain visible at all times enhancing the natural beauty of the material and give every LEICHT Kitchen its own special character. Light and other surround influences can cause colour deviations with time, therefore front samples cannot be seen as binding.

Wood surfaces are subject to a natural ageing process that can lead to discoloration through light- and environment influence (smoke, grime, steam etc). Regular cleaning and care is recommended. Differences in colour and texture cannot be ruled out with foil-covered as well as laminated components for production-technical reasons. These specific characteristics are therefore no reason for complaint. Subsequently front samples are not binding for exact colour and surface texture. Through everyday use changes in surfaces can occur on wooden as well as laminate components. These are no reason for complaint.
Care and Maintenance

The enclosed instructions for care and maintenance are for use by the end consumer.

Order processing

The individual production of a HIGHLINE kitchen necessitates a checked and approved order. Alterations are no longer possible once the order confirmation has been made.

Carcase information

Please find information on carcase style in the LEICHT price and type list 11.01–04. All available coloured carcase edges are possible. LEICHT recommends the following for coloured carcase edges to the HIGHLINE front variants:

Material style

The wood veneer surround accessories with code U1, U2 and U3 are produced with a satin finished surface. Wood veneer surround accessories with code U4, U5 and U6 have a high gloss surface. Non-pigmented lacquers conserve the beauty of these woods. The natural material wood always has irregularities in texture and colour. Different lighting and a change of grain direction can result in apparent changes in appearance. These differences are a natural characteristic and are therefore no cause for complaint. All wood veneer surfaces are sealed with a high quality, environmentally friendly lacquer system with UV-stabilisers. It is not possible to maintain an absolute light fastness over the years. This just cannot be achieved with natural wood surfaces.

Plinths / Visible sides

Normal carcase sides and plinth covers are standard laminate finish. Wood veneer is available, where seen in the HIGHLINE styles, at extra charge.

Handle types

Most handles from the LEICHT ranges are available.
The exception, however, are the griprails 802.413 and 805.405, which are not possible.
